

IGG MANAGEMENT APP DOCUMENTATION

Content:

- 1. Requirements***
- 2. Installation***
- 3. FAQ***

REQUIREMENTS

[The app was designed to be used on tablets only. Tablet type/manufacture makes no difference. Accessing the app via other devices such as phones, laptop, or desktop computer will probably result in a broken user interface.] - **Required: A PHP enabled Web Server and the latest Google Chrome browser.**

INSTALLATION

- Open **IGG.zip** and upload the folder named **"lex"** into your web root.
[This means accessing this folder via <http://www.yoururl.com/lex>]
- Create a database on your server (with a strong password and username). There's a folder inside IGG.zip named **"SQL File (Fresh installation)"**. Import the SQL file inside this folder into your database. *(Remember to uncheck "Do not use AUTO_INCREMENT for zero values" before importing, if using phpMyAdmin).*
- Go into the **"lex"** folder on your server and open the file named **"db_config.php"**
- Update **"db_config.php"** with your database information and save. The admin login details are included in this file. Finally, move **"db_config.php"** outside of your web root, and you're done.
- Go to <http://www.yoururl.com/lex> and you should be asked to click a link to login.
- You should now be able to assign new leaders to a unit, who in turn can login and add new scouts to their unit if they wish. The admin has all privileges.

FAQ

How admin's password: Go to "<http://yoururl.com/lex/cp.html>" to encrypt a new password and follow the instructions.

How to change a leader's password: Click on "view leaders" menu and click edit, then update with new information.

Do the leaders have the same access level? No. The leaders cannot add new leaders, nor see or edit the information of anyone outside of their unit. They can however change their own username, password, and contact details.

Can the leaders change their own unit? No. This will lead to a leader being able to view information from some other unit. The admin however can re-assign a leader to a different unit by editing the leader's information.

Can leaders view other leaders? Yes, but a leader is only able edit her own information.

Problem installing the app or bugs discovered: Email Ben Shittu (shittug@tcd.ie) the lead UI/PHP developer of the team and the documentation author.

Problems with database: Email Omar Nouhi (nouhio@tcd.ie). The lead database developer.
